

The BodiTrak Smart Bed

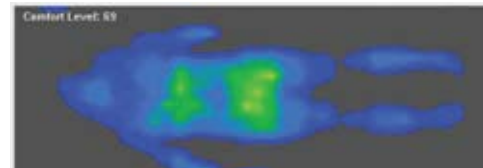

BodiTrak Beds Sense Your Patient's Body Pressures and Intelligently Adjust

BEFORE: Pressure Points

AFTER: Distributed Pressures

Imagine a bed that continually senses your patient's pressure distribution and then automatically adapts to redistribute pressures away from vulnerable parts of the body.

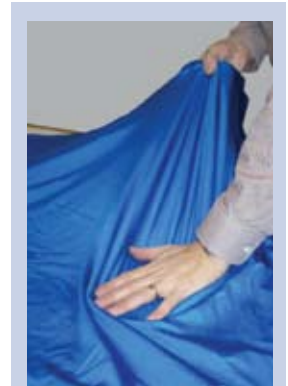

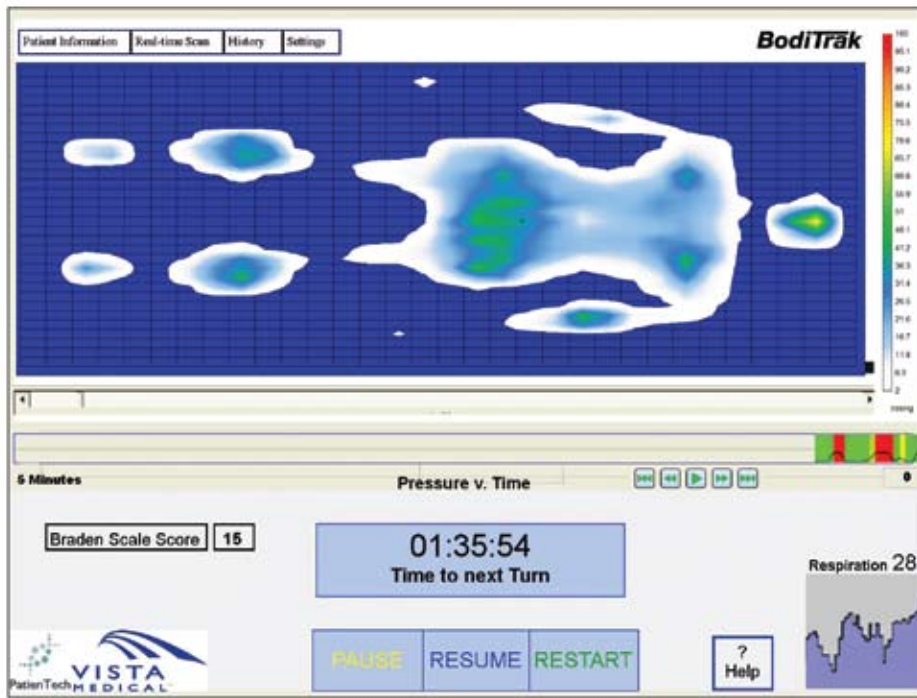

Using Smart Fabric Technology, our advanced system can help:

- minimize costs to the health system caused by pressure ulcers
- nursing staff make informed decisions about patient care
- ensure compliance of clinical standards
- enhance overall quality of care

PATENTED STRETCH SENSORS *The heart of our system is an innovative pressure sensing fabric that is stretchable and breathable.*

The Smart Bed and BodiTrak systems are both based on the same patented elastic sensor technology.

BodiTrak Features

- Real Time pressure mapping
- History of pressure over time
- Focused pressure areas highlighted
- Pressure vs. time monitor
- Braden Scale risk factor
- Selectable Time to Turn
- Maximum pressure over time
- Selectable alarms
- Central station monitoring display

Technical Specifications

Sensor material	layers of Lycra
Flexibility	3D stretch
Number of sensors	2048
Computer Interface	Integrated with sensor USB connected and powered
Cover	Eastex or Lycra
Thickness	2.5 mm
Scan speed	user selectable
Sensor size	30 inches by 75 inches
